Editorial Policy. SIGNAL PROCESSING is an Interdisciplinary Journal presenting the theory and practice of signal processing. Its primary objectives are the following:

- Dissemination of research results and of engineering developments to all signal processing groups and individuals.
- Presentation of practical solutions to current signal processing problems in engineering and science.

The editorial policy and the technical content of the Journal are the responsibility of the Editor-in-Chief and the Editorial Board. The Journal is self-supporting from subscription income and contains a minimum amount of advertisements. Advertisements are subject to the prior approval of the Editor-in-Chief. The journal welcomes contributions from every country in the world.

Scope. SIGNAL PROCESSING incorporates all aspects of the theory and practice of signal processing (analogue and digital). It features original research work, tutorial and review articles, and accounts of practical developments. It is intended for a rapid dissemination of knowledge and experience to engineers and scientists working in signal processing research, development or practical application.

Subjects. Subject areas covered by the Journal include:
Signal Theory, Stochastic Processes, Detection and Estimation, Spectral Analysis, Filtering, Signal Processing Systems, Software Developments, Image Processing, Pattern Recognition, Optical Signal Processing, Digital Signal Processing, Multi-dimensional Signal Processing, Communication Signal Processing, Biomedical Signal Processing, Geophysical and Astrophysical Signal Processing, Earth Resources Signal Processing, Acoustic and Vibration Signal Processing, Data Processing, Remote Sensing, Signal Processing Technology, Speech Processing, Radar Signal Processing, Sonar Signal Processing, Special Signal Processing, Industrial Applications, New Applications.

Membership and Subscription Information:
Signal Processing (ISSN 0165-1684) is published in six volumes (18 issues) a year. For 1994 Volumes 35–40 are scheduled for publication. Subscription prices are available upon request from the publishers. Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by surface mail except to the following countries where air delivery (S.A.L. – Surface Air Lifted) is ensured: Argentina, Australia, Brazil, Canada, Hong Kong, India, Israel, Japan, Malaysia, Mexico, New Zealand, Pakistan, People's Rep. of China, Singapore, South Africa, South Korea, Taiwan, Thailand, USA. For the rest of the world, airmail charges are available upon request. Claims for missing issues will be honoured free of charge if made within six months after the publication date of the issues. Mail orders and inquiries to: Elsevier Science B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands. For full membership information of the Association, possibly combined with a subscription at a reduced rate, please contact: EURASIP, P.O. Box 134, CH-10000 Lausanne 13, Switserland.

US mailing notice – Signal Processing (ISSN 0165-1684) is published monthly, except semimonthly in January, March, May, July, September and November by Elsevier Science B.V., Molenwerf 1, Postbus 211, 1000 AE Amsterdam, The Netherlands. Annual subscription price in USA US $1140 (subject to change), including air speed delivery. Second class postage rate is paid at Jamaica, NY 11431.
USA POSTMASTERS, Send address changes to Signal Processing, Publications Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003. Airfreight and mailing in the USA by Publication Expediting.

Special regulations for authors. Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.
Special regulations for readers in the USA - This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 222 Rosewood Drive, Danvers, MA 01923, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. The fees indicated on the first page of an article in this issue will apply retroactively to all articles published in the journal, regardless of the year of publication. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.
No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein.
Although all advertising material is expected to conform to ethical standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

Instructions to authors

General. Prospective authors are encouraged to submit manuscripts within the scope of the Journal. To quality for publication, papers must be previously unpublished and not be under consideration for publication elsewhere. All material should be sent in quadruplicate (original plus three copies) to the Editor-in-Chief. Contributors are reminded that once their contribution has been accepted for publication, all further correspondence should not be sent to the Editor, but directly to the publishers (Editorial Department, Elsevier Science B.V., P.O. Box 1991, 1000 BZ Amsterdam, The Netherlands).
All manuscripts will be assessed by at least two (anonymous) referees.
Upon acceptance of an artice, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.
Accepted languages are English (preferred), French and German. Each contribution should be accompanied by abstracts (see *Abstracts*). Page proofs will be sent to the principal author with an offprint order form. Fifty offprints of each article can be ordered free of charge. Costs arising from alterations in proof, other than of printer's errors, will be charged to the authors.
Short papers not exceeding five typewritten pages will be reviewed immediately. As their proofreading will be done by the publishers and no page proofs will be sent to the authors, their presentation should be very clear.
Typed material (including abstracts, list of references) should be double spaced on one side of A4 size (297 × 210 mm) paper with a wide margin. All pages should be numbered. The first page should include the article title and the author's name and affiliation, as well as a name and mailing address to be used for correspondence and transmission of proofs. The second page should include a list of unusual symbols used in the article and the number of pages, tables and figures. It should also contain the keywords in English.

Abstracts. The text of the paper should be preceded by abstracts of no more than 200 words in English, and, if possible, in French and German. Abstracts should contain the substance of the methods and results of the paper. The abstracts of short papers should be less than 50 words.

Figures. All illustrations are to be considered as figures, and each should be numbered in sequence with Arabic numerals. The drawings of the figures must be originals, drawn in black india ink and carefully lettered, or printed on a high-quality laser printer. Each figure should have a caption and these should be listed on a separate sheet. Care should be taken that lettering on the original is large enough to be legible after reduction. Each figure should be identified. The approximate place of a figure in the text should be indicated in the margin.

Reproduction in colour. In case the author wishes one or more figures to be printed in colour, the *extra* costs arising from such printing will be charged to the author. In this case 200 offprints may be ordered free of charge. More details are available from the Publisher.

Equations. Equations to which reference is made in the text should be numbered; equations should be referred to by citing the equation number enclosed in parentheses. Special care should be taken of those symbols which might easily cause confusion (e.g., 1, ℓ; o, O, 0; κ, k, K; x, X, $\times$, χ, z, Z; π, ϖ, ϕ, Φ, φ; τ, t, T, Γ; ν, v, V; $<$, $\langle$, (,), $\rangle$, $>$; w, ω; P, p, ρ, etc.). All handwritten letters and unusual symbols should be identified in the margin the first time they occur in the text. Mathematical notation should be selected to simplify the typesetting process. In particular, notation calling for symbols appearing one directly over the other, as well as third-order indices, should be avoided.

Tables. Tables should be typed on separate sheets. Each table should have a number and a title. The approximate places for their insertion in the text should be indicated in the margin.

References. References must be *in alphabetical order* in the style shown below:

Book	[1] A.V. Oppenheim et al., *Digital Signal Processing*, Prentice Hall, Englewood Cliffs, NJ, 1975, Chapter 10, pp. 491–499.
Journal	[2] F.J. Harris, "On the use of windows for harmonic analysis with the discrete Fourier transform", *Proc. IEEE*, Vol. 66, No. 1, January 1978, pp. 53–83.
Conference Proceedings	[3] D. Coulon and D. Kayser, "A supervised-learning technique to identify short natural language sentence", *Proc. 3rd Internat. Joint Conf. on Pattern Recognition*, Coronado, CA, 8–11 November 1976, pp. 85–89.
Contributed Volume	[4] E.F. Moore, "The firing squad synchronization problem", in: E.F. Moore, ed., *Sequential Machines, Selected Papers*, Addison Wesley, Reading, MA, 1964, pp. 213–214.

Footnotes in text. Footnotes in the text should be identified by superscript numbers and listed consecutively on a separate page.

EUROPEAN ASSOCIATION FOR SIGNAL PROCESSING

Administrating Committee
President: U. Heute, LNS/Techn. Fakultät/CAU, Kaiserstraße 2, 24143 Kiel, Germany
Secretary-treasurer: P. Grant, Electrical Engineering, Univ. of Edinburgh, Edinburgh EH9 3JL, UK
Workshops Coordinator: W. Mecklenbräuker, Institut für Nachrichtentechnik, TU Wien, Gußhausstraße 25/389, A-1040 Wien, Austria
Brussels Liaison: J. Vandewalle, Katholieke Universiteit Leuven, Kardinaal Mercierlaan 94, B-3001 Leuven, Belgium
Past President: M. Bellanger, CNAM, 292 rue Saint-Martin, 75141 Paris Cedex 03, France
